Capabilities statement

As of August 2026

Complex systems, made operational.

WebFirst Federal designs and delivers secure digital systems for civilian government, public health, defense, education, and other regulated organizations. The practice is organized in three areas.

01 Digital Experience

Accessible platforms, content systems, service design, and mobile experiences built for public scale. Section 508 and WCAG AA are treated as authorization requirements, not a late overlay.

02 Data and Intelligence

Data engineering, analytics, applied AI, and retrieval systems that keep operators in the loop. Generated output does not ship without a named human review step.

03 Secure Delivery

DevSecOps, cloud modernization, and continuous authorization for regulated environments. Evidence is produced by the delivery system, not reconstructed for a binder.

CAGE, UEI, and contract vehicles are not published in this statement. They are provided in proposal packages for eligible acquisitions. Inquiries:
